PROFILE

Second-year Computer Engineering student at Queen's University Belfast, interested in quantitative finance, market microstructure and performance-conscious software. Experience in data analysis and dashboards, with personal projects exploring order matching and option pricing. Seeking to build practical skills across Python, C++ and financial-market systems.

EDUCATION

Queen's University Belfast | BEng Computer Engineering | Expected 2028

- Relevant study: Data Structures & Algorithms, Mathematics, Probability and Statistics, Digital Systems and Introduction to AI & Machine Learning (confirm module titles against your transcript).

PSG Institute of Advanced Studies, Coimbatore | Academic Pathway | 2024–2026

- Academic pathway to Queen's University Belfast; use the exact wording shown in official enrolment records.

TECHNICAL SKILLS

- Programming: Python, C++ and SQL; include C or Java only if you can use and explain them confidently.
- Data & quantitative: NumPy, pandas, probability and statistics, data analysis, introductory option-pricing concepts.
- Development tools: Git/GitHub, Jupyter, Power BI; include FastAPI, WebSockets, Streamlit or n8n only if personally used.
- Hardware acceleration: not listed as a completed skill; add GPU/CUDA/AVX-512 only after you have implemented and tested them.

TECH PROJECTS

Real-Time Order Matching Engine | Personal Project | Python, C++ (in progress)

- Developing a simplified order book based on price-time priority.
- Testing order placement, cancellation and matching scenarios, including partial fills as implemented.
- Future extensions may include a REST/WebSocket interface and performance benchmarking once the core engine works.

Options Pricing & Risk Engine | Personal Project | Python (in progress)

- Building a European option-pricing model, starting with Black–Scholes and understanding the inputs and assumptions.
- Planned extensions include Monte Carlo simulation, option sensitivities (Greeks), numerical validation and performance benchmarking.
- Hardware acceleration will be added only after a correct CPU baseline is tested on the available Mac hardware.

AI Workflow Automation | Personal Project | n8n, AI tools

- Building a workflow that classifies email, flags potential spam and organises results; describe only steps that are implemented and tested.

EXPERIENCE

Gradtwin Technologies, Chennai | Data Science Intern | Jul–Oct 2025

- Cleaned and analysed client datasets in Python, resolving inconsistent or missing records before analysis.
- Prepared dashboards and reports to communicate findings to the team.
- Assisted with machine-learning model evaluation and interpretation of results.

OXI.AI, Coimbatore | Data Analyst Intern | Jul 2025

- Analysed restaurant transaction data to identify sales patterns and trends.
- Created dashboards comparing product, location and time-period performance to support pricing analysis.
- Worked with the pricing team to prioritise analysis against internal deadlines.

SKILLS PROFILE

- Problem Solving: practice debugging Python/C++ programs and testing edge cases through programming practicals.
- Communication: national debate and speech tournament participation; presented analysis findings during internship work.
- Leadership & Teamwork: Team Everest volunteering; include Class Representative and Entrepreneurship Club only if you can verify these roles.
- Business Awareness: interest in restaurant operations and transaction data informed by exposure to a family restaurant business (optional; retain only if you want this personal detail on the CV).

INTERESTS & ACHIEVEMENTS

- AI Covid Warrior Global Contest, AI World School — First Prize (2021).
- Debate & Public Speaking — add the exact official tournament name and verified placement.
- Team Everest, India — Volunteer for two years: taught children, supported events, created gifts and contributed to fundraising.

- Market microstructure, option pricing and low-latency systems — list as interests while learning; do not imply professional expertise.

CERTIFICATIONS

- Artificial Intelligence & Machine Learning — Hope AI Institute (2025), if completed.
- AI/ML for Geodata Analysis — Indian Institute of Remote Sensing (IIRS), ISRO (2024), if certificate awarded.
- Remote Sensing & GIS — IIRS, ISRO (2021), if certificate awarded.

ADDITIONAL INFORMATION

- Languages: English and Tamil (fluent); Hindi (conversational).
